creating a logical page providing an aligned view of the data;

establishing a relationship between the logical page and the physical memory page such that the logical page is associated with the plurality of physical memory clusters;

forwarding a list of the logical pages to a storage resource such that the data referenced by the logical pages are stored subsequently into a storage resource; and

merging an existing physical memory cluster with a new physical memory cluster based on the offset and length of the existing physical memory cluster and based on the offset and length of the new physical memory cluster.

Claim 11. (Currently amended) ~~The system of claim 6~~ A computer system comprising:

a memory including at least one physical memory page and at least one logical page;

a network layer for receiving non-aligned data, wherein the network layer receives and transmits the data as data packets that are odd-sized, arrive asynchronously, and contain metadata embedded with real data;
